

# Klaes e-prod

• THAT'S THE WAY IT IS PRODUCED TODAY •

Have you ever estimated roughly how much time you spend daily to print, sort and bring into production your manufacturing documents? Can you imagine how much time your employees need every day to find materials?

Well, with e-prod of Klaes, this will be "water under the bridge". In the future, create the manufacturing information in a paperless form. By pressing a button, monitors, barcode or transponder display what actually must be done at the respective workplace.

It is very easy to plan and reschedule orders. With a few mouse clicks your employees have the latest information on the monitor. And at any time, you have a quick and complete overview what is going on in the workshop. Klaes e-prod knows exactly where, for example, glass for sashes or loose accessories for special orders can be found.

With a connection to capacity planning, your dispatcher controls customer orders, too. Klaes e-prod quality management is the electronic response to the comprehensive requirements of the CE-sign and the "WPK" (German Chamber of Auditors). Thus, all tasks, checks, inspections, maintenance work

and errors are centrally organized. The results and incidents are automatically archived and provide, in addition to information for "CE WPK", important tools for further optimization.

And very important: the "WPK" with Klaes e-prod gives you the assurance that the necessary activities will be executed. And most important: It is easy to handle because we use a technology which is used by millions of people every day - the Internet!

# Klaes e-prod

OFFERS YOU

- ◆ Cost reduction due to lower paper consumption and less “PP-pressure-periods”
- ◆ Quick and flexible organization of production by quick planning and rescheduling
- ◆ Increase in production through improved flow of information
- ◆ Flexible representation of information by individually designed monitor workstations
- ◆ Production status, always up-to-date through order tracking
- ◆ Communication with inventory management and capacity planning
- ◆ Location information of glass, sash or frame by warehouse administration
- ◆ Intuitive handling - therefore an immediate use is possible
